

March 19, 2020

To control or lessen the possibilities of disease being spread by the collection of solid waste from residential households, Pryor Waste & Recycling is making the following request for household trash to be placed in plastic bags for all waste collected.

Due to a possible health hazard that it create loose trash placed in a container will not be emptied, bagged trash only. Also due to the rain and wind, loose trash is sticking to the sides of container or the wind is blowing the loose trash. The daily route workers at times are having to handle unbagged trash which we are strongly discouraging due to the possibly of spreading disease to our workers and their families.

We further recommend that the bagged trash be placed in some sort of container so that animals cannot gain access to disposed waste.

Please bag all trash: Maximum allotment per pick up day is a total of 6 thirty two gallon, tied plastic bags of household trash/ vegetation or 4 tied plastic bags of household trash/vegetation and 2 tied bundles of 2'x4' small limbs. Each bag or bundle is not to exceed 50 lbs. Plastic bags must be capable of handling at least 50 lbs. of weight.

As a reminder: Always dispose needles legally and properly.

Any questions please call Pryor Waste & Recycling (918) 825-0026

Thank You
